

Yash Tyagi

Full-Stack Engineer · Real-Time Systems · IoT

Yashxyagi06@gmail.com | +91 95997 61161 | linkedin.com/in/yashxyagi | github.com/Yashtyagi2406 | Noida, UP, India

EDUCATION

KCC Institute of Technology and Management

Greater Noida, UP

B.Tech — Computer Science & Engineering

2023 – 2027

CGPA: 7.7 / 10.0 · Relevant Coursework: DSA, Operating Systems, DBMS, Computer Networks, Software Engineering

PROJECTS

VolunteerCompass | Live | GitHub

2026

React 18, TypeScript, Node.js, Express, PostgreSQL, Prisma, Socket.io, Redis, Bull, JWT, Zod, Vercel, Render

- Architected a full-stack volunteer management platform with interactive Leaflet maps, RSVP workflows, and role-based access control (Volunteer / Organizer)
- Built real-time notifications via Socket.io and a Bull/Redis background job queue for automated match suggestions and recurring event scheduling
- Deployed end-to-end with CI/CD on Vercel + Render; Prisma-managed PostgreSQL schema spanning users, events, RSVPs, matches, and notifications

Sync Home — Hybrid IoT Home Automation | Live

2026

React, TypeScript, Vite, Three.js (R3F), GSAP, MQTT, TanStack Query, Tailwind CSS, Recharts, Vitest, Playwright

- Led frontend development in a 4-person team; built a real-time MQTT-powered dashboard for relay-driven smart device control, architected for seamless hardware scaling
- Delivered an immersive 3D home visualization using React Three Fiber + GSAP, combining live IoT telemetry with cinematic UI — a technically rare combination at the undergraduate level

AI Governance & Cost Management Platform | GitHub

2026

Next.js 14, TypeScript, Go, Python, PostgreSQL, ClickHouse, Kafka, Redis, Docker, Kubernetes, OPA (Rego), FastAPI, Terraform, AWS EKS

- Designed and built a production-grade multi-tenant SaaS platform — a transparent proxy layer between enterprise apps and AI providers (Claude, GPT, Gemini, Azure OpenAI) — enabling real-time cost tracking, budget enforcement, and governance policy evaluation with under 50ms added latency
- Engineered a microservices architecture (11 services across Go, TypeScript, Python) with Kafka event streaming, ClickHouse columnar analytics, and an OPA-based policy engine supporting model allowlists, DLP scanning, rate limiting, and approval workflows — all without requiring client code changes
- Built an ML forecasting pipeline (ARIMA + XGBoost ensemble) for 30-day spend predictions and an Isolation Forest anomaly detector for real-time usage spike detection, deployed via FastAPI with sub-second response times

ACHIEVEMENTS

Top 5 — Hackaccino 4.0: Ranked in the top 5 out of 2,936 teams at Bennett University's 24-hour national hackathon — ₹15L+ prize pool — Feb 2026

Top 5 — Mind Installers Hackathon 4.0: Ranked in the top 5 at IIMT College of Engineering's 30-hour hackathon, Greater Noida — Apr 2026

HackIndia Spark 4: Competed in national-level HackIndia Spark hackathon

Cricket Team Captain: Led 11-member team to championship victory at KCC Institute's institutional cricket tournament, 2023–24

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL
Frontend	React 18, Next.js, Three.js, GSAP, Tailwind CSS, shadcn/ui, Redux, Vite
Backend	Node.js, Express.js, Socket.io, REST APIs, MQTT, Kafka, JWT, Zod
Database & Cache	PostgreSQL, MongoDB, Redis, Prisma ORM, Mongoose, Bull
DevOps & Tools	Docker, Git, GitHub CI/CD, Vercel, Render, Netlify, Postman, Vitest, Playwright
Concepts	DSA, OOP, MVC, Microservices, Real-Time Systems, IoT, Agile
